

Product Requirements Document (PRD)

LifeDesk

Tagline: *One place to manage the things that keep your life running.*

Product Type: Digital life-management platform

Primary Market: Nigeria

Initial Platform: Mobile app (Android/iOS), with web dashboard later

Target Users: Individuals, households, families, vehicle owners, renters/homeowners, and eventually small-business owners

Core Category: Everyday Solutions / Smart Utilities

1. Product Overview

LifeDesk is an everyday Nigerian life-management platform designed to help people organize, monitor, and maintain the responsibilities that keep their lives running.

Unlike a traditional:

- finance app,
- calendar,
- to-do list,
- health app,
- document wallet, or
- service marketplace,

LifeDesk brings these everyday responsibilities together and adds a **proactive intelligence layer**.

The platform doesn't simply tell users what they have entered.

It asks:

“What is about to become a problem?”

For example:

 Your rent is due in 30 days.

- ⚠️ Your driver's licence expires in 45 days.
- 🔧 Your generator maintenance is overdue.
- 🇳🇮 Your internet subscription renews tomorrow.
- 🚗 Your vehicle insurance expires in 12 days.
- 💡 Your electricity spending is 24% higher than your usual average.

The goal is to move users from **reacting to problems** → **anticipating problems**.

2. Problem Statement

Nigerians manage many separate responsibilities every month and year:

- Rent
- Electricity
- Water
- Internet
- School fees
- Vehicle maintenance
- Fuel
- Insurance
- Government documents
- Subscriptions
- Household repairs
- Family appointments
- Important dates
- Service providers

These responsibilities are usually scattered across:

- WhatsApp
- SMS
- email
- paper receipts
- calendars
- bank statements
- notebooks
- phone reminders
- memory

This creates a major problem:

People don't necessarily forget because they are irresponsible.

They forget because **life administration is fragmented**.

A missed renewal can lead to:

Forgotten deadline → penalty → inconvenience → emergency expense → stress.

LifeDesk aims to intervene **before the chain begins**.

3. Product Vision

Vision

To become the **personal operating system for everyday life in Nigeria**.

LifeDesk should eventually become the place users open when they want to know:

“What do I need to take care of?”

and:

“What could become a problem soon?”

4. Product Mission

To make everyday life easier by helping people:

Remember → Organize → Maintain → Prepare → Act

before small responsibilities become expensive or stressful problems.

5. Target Users

Primary Persona 1 — The Busy Professional

Age: 25–45

Has:

- rent
- subscriptions
- vehicle
- insurance
- utilities
- work responsibilities

Problem:

“I have too many things to remember.”

Primary Persona 2 — The Household Manager

Could be a parent, spouse, caregiver, or household administrator.

Manages:

- school fees
- rent
- electricity
- repairs
- family appointments
- household purchases
- important dates

Problem:

“Everything in the house somehow comes to me.”

Primary Persona 3 — The Vehicle Owner

Manages:

- fuel
- servicing

- tyres
- insurance
- registration
- driver's licence
- repairs

Problem:

“I only remember maintenance when something breaks.”

Primary Persona 4 — The Renter/Homeowner

Manages:

- rent
- service charges
- utilities
- repairs
- maintenance
- landlord/agent information

Problem:

“I know these things are coming, but I don't have one place to manage them.”

6. Core Product Principle

LifeDesk should not become another complicated productivity app.

The product should answer three questions:

- 1. What needs my attention now?**
- 2. What is coming soon?**
- 3. What could become a problem if I ignore it?**

That should guide the entire UX.

7. Core Product Architecture

LifeDesk will initially have **six major areas**:

Home

Transport

Money & Bills

Documents

Family

Services & Maintenance

And above all of them:

LifeDesk Intelligence

“What's about to become a problem?”

8. Feature Requirements

8.1 Smart Dashboard

The dashboard is the heart of LifeDesk.

Instead of showing dozens of menus, it immediately displays:

Good morning, Temmy 🖐️

Your LifeDesk

You're on track

Needs attention

-  Electricity bill due tomorrow
-  Vehicle insurance expires in 12 days
-  Generator service overdue

Coming up

-  Rent — 28 days
-  Driver's licence — 45 days
-  Netflix — 3 days

This month's life costs

Utilities: ₦XX,XXX

Transport: ₦XX,XXX

Subscriptions: ₦X,XXX

Quick Actions

- + Add reminder
 - + Add document
 - + Add bill
 - + Add vehicle
 - + Add family member
-

9. Home Management

Users can create one or more properties.

Property profile

- Property name
- Address
- Rent amount
- Rent due date

- Landlord/agent
- Tenancy start date
- Tenancy end date
- Service charge
- Security fee
- Water
- Electricity
- Maintenance notes

Home maintenance

Users can track:

- Generator
- AC
- Fridge
- Washing machine
- Water pump
- Plumbing
- Electrical systems
- Cleaning
- Pest control
- Painting
- Repairs

Example:

Generator

Last serviced: 12 July

Recommended service: 12 October

Status: ⚠ Due

10. 🚗 Transport Management

Users can add:

Vehicle profile

- Vehicle type
- Make/model
- Year

- Plate number
- VIN/chassis number
- Mileage
- Purchase date

Track

- Fuel
- Servicing
- Oil change
- Tyres
- Battery
- Repairs
- Insurance
- Registration
- Vehicle documents

Smart alerts

 Oil change may be due.

 Vehicle insurance expires in 18 days.

 Your next service is approaching.

11. Money & Bills

This is **not intended to compete with banking apps**.

LifeDesk focuses on **financial obligations**, not banking.

Users can track:

Bills

- Electricity
- Water
- Internet
- Cable TV
- Phone
- Rent
- School fees

- Security
- Waste collection

Subscriptions

- Netflix
- Spotify
- Google services
- Software
- Gym
- Other recurring payments

Recurring payments

Users enter:

Amount → **Frequency** → **Due date** → **Category**

LifeDesk handles the reminder.

12. Document Vault

Users can store important documents securely.

Examples:

- National ID information
- Passport
- Driver's licence
- Vehicle documents
- Insurance
- Certificates
- School documents
- Professional certificates
- Property documents

Each document can have:

Issue date

Expiry date

Renewal reminder

Document category

Secure file/photo

Example:

Driver's Licence

Expires: 24 November 2026

 Renewal reminder: 24 October 2026

Security requirement

Sensitive documents must be encrypted and protected using device authentication such as:

- PIN
- fingerprint
- Face ID where available

LifeDesk should collect the **minimum information necessary**.

13. Family Management

Users can create a household.

Example:

Adekunle Household

-  You
-  Spouse
-  Child
-  Parent

Each family member can have:

- Important dates
- Appointments
- Documents
- School payments
- Tasks

- Reminders

Shared responsibilities

Example:

School fees due in 14 days

Assigned to:

Dad

Status:

 Pending

This transforms LifeDesk from an individual reminder system into a **household management system**.

14. Services

This section connects users with services they frequently need.

Categories:

- Plumber
- Electrician
- Mechanic
- Generator technician
- AC technician
- Cleaner
- Carpenter
- Painter
- Phone technician
- Appliance repairer

Phase 1

Users can simply save their trusted service providers.

Example:

My Electrician

Name: John
Phone: XXX
Last used: August 2026
Rating: ★★★★★

Later phase

LifeDesk can introduce a **verified service marketplace**.

Users could:

Find → Compare → Book → Pay → Review

This creates a second major business opportunity for LifeDesk.

15. 🧠 The Killer Feature — LifeDesk Intelligence

This is what separates LifeDesk from a normal reminder app.

The LifeDesk Risk Engine

The system continuously examines:

- dates
- recurring expenses
- maintenance schedules
- document expiry
- user activity
- household responsibilities
- historical patterns

and generates actionable alerts.

Example

Instead of:

“Rent reminder: 30 days.”

LifeDesk could say:

 **Rent is due in 30 days**

Your last recorded rent payment was ₦1,200,000.

Estimated amount to prepare: ₦1,200,000

Another example

Instead of:

“Generator service.”

LifeDesk says:

 **Your generator maintenance is overdue**

Last service: 4 months ago.

Delaying routine maintenance may increase the likelihood of unexpected repair costs.

16. “Life Risk” Dashboard

This could become another signature feature.

Your LifeDesk Status

 **Stable**

or

 **Needs Attention**

or

 **Immediate Attention**

Based on unresolved responsibilities.

For example:

This week

- 1 urgent issue
- 3 upcoming
- 8 on track

The system could say:

You have 3 things that may become problems this week.

That is much more useful than simply displaying 15 reminders.

17. Smart Prioritisation

Not every reminder deserves the same urgency.

LifeDesk should classify tasks as:

● **Critical**

Needs immediate attention.

● **Important**

Should be handled soon.

● **Upcoming**

Prepare in advance.

● **Routine**

No immediate action required.

For example:

Passport expires tomorrow

→ ● Critical

Netflix renews tomorrow

→  Routine

This prevents **notification fatigue**.

18. Smart Notification System

Users choose how LifeDesk communicates.

Example notification schedule

90 days before

Your driver's licence will expire in 3 months.

30 days before

Your driver's licence expires next month. Consider planning your renewal.

7 days before

 Your driver's licence expires in 7 days.

After expiry

 Your driver's licence has expired.

Users can customize notification frequency.

19. LifeDesk “Prepare For It”

This is another feature I would add.

When something important is approaching, LifeDesk creates a preparation checklist.

Example:

 **Rent due in 30 days**

Prepare

- ☐ Confirm rent amount
 - ☐ Check landlord details
 - ☐ Review service charge
 - ☐ Set money aside
 - ☐ Confirm payment method
 - ☐ Save payment evidence
-

Vehicle renewal

- ☐ Insurance
- ☐ Vehicle documents
- ☐ Inspection
- ☐ Renewal fees

This changes LifeDesk from **reminder** → **action assistant**.

20. Receipt & Record Capture

Users can photograph or upload:

- receipts
- bills
- invoices
- service records
- warranty documents

LifeDesk can extract:

Amount

Date

Vendor

Due date

Category

The user confirms before saving.

Example:

 Upload electricity bill

↓

Detected

Amount: ₦45,200

Due date: 12 Oct

Category: Electricity

Save?

Yes / Edit

21. Warranty Tracker

This could be surprisingly useful.

Users register purchases:

- Refrigerator
- TV
- Generator
- Washing machine
- Laptop
- Phone
- AC
- Appliances

LifeDesk tracks:

Purchase date

Warranty expiry

Receipt

Service provider

Then:

⚠ Your refrigerator warranty expires in 21 days.

This can save users money.

22. Emergency Information

Users can optionally create an emergency profile.

For example:

Emergency Information

- Emergency contacts
- Vehicle information
- Insurance
- Important documents
- Blood group field (optional)
- Allergies/medical information (optional)

Because this enters sensitive territory, the product should make these fields **strictly optional**, locally protected, and clearly separated from the core product.

23. Offline-First Design

This is especially important for Nigeria.

LifeDesk should continue working when:

- internet is slow
- data is unavailable
- the user is travelling
- network coverage drops

Core functions should work offline:

- reminders
- stored records
- documents already downloaded
- tasks

- household information

Synchronization occurs when connectivity returns.

24. Low-Data Design

LifeDesk should be designed for users who don't want an app constantly consuming data.

Requirements:

- Lightweight app
 - Minimal background data
 - Compressed images
 - Offline caching
 - Sync only when necessary
 - User-controlled backup
-

25. Security & Privacy

This is a major product requirement because LifeDesk could contain extremely sensitive information.

Security requirements

- Encryption in transit
- Encryption at rest
- Device authentication
- Secure document storage
- Session timeout
- Remote logout
- Backup encryption
- Data deletion
- Export personal data
- Clear privacy controls

Important principle

LifeDesk should not sell personal data.

The business should make money from the product and services—not users' private information.

26. AI Features

AI should support the user rather than become the product.

AI Life Assistant

Users can ask:

“What do I need to take care of this month?”

LifeDesk:

You have 5 upcoming responsibilities:

1. Internet renewal — Oct 5
 2. Generator service — Oct 8
 3. School payment — Oct 10
 4. Electricity bill — Oct 12
 5. Rent preparation — Oct 30
-

Other AI capabilities

“What am I forgetting?”

“How much do I need to prepare this month?”

“Show me everything expiring this year.”

“Which recurring expenses can I review?”

“What needs attention this week?”

27. User Journey

New user

Download LifeDesk

Create account

Select:

What do you want to manage?

- ☐ Home
- ☐ Vehicle
- ☐ Bills
- ☐ Documents
- ☐ Family
- ☐ Maintenance

Add first important item

Example:

Rent

LifeDesk asks:

When is your next rent due?

User enters date.

LifeDesk automatically creates:

30-day reminder

14-day reminder

7-day reminder

Dashboard begins building.

28. MVP

We should **not build everything initially**.

MVP Version 1

Dashboard

- Upcoming responsibilities
- Overdue items
- Critical alerts

Reminders

- One-time reminders
- Recurring reminders

Home

- Rent
- Utilities
- Maintenance

Transport

- Vehicle profile
- Maintenance
- Documents

Bills

- Recurring bills
- Subscriptions

Documents

- Document records
- Expiry dates
- Secure storage

Intelligence

- Upcoming-risk alerts
- Overdue alerts
- Smart prioritisation

This is enough to validate the core concept.

29. Phase 2

Add:

- Family management
 - Warranty tracker
 - Receipt scanning
 - Service-provider directory
 - Household sharing
 - AI Life Assistant
 - Budget preparation
 - Advanced analytics
-

30. Phase 3

Build the larger ecosystem:

LifeDesk Marketplace

Users can discover and book:

- Mechanics
- Electricians
- Plumbers
- Cleaners
- AC technicians
- Generator technicians
- Handymen

LifeDesk could know:

“Your AC maintenance is due.”

Then immediately offer:

Find a verified AC technician near you.

This creates a natural bridge between **problem detection** → **solution discovery**.

31. Business Model

LifeDesk could use a **freemium model**.

Free

- Basic reminders
- Limited records
- Basic dashboard
- Basic document tracking

LifeDesk Plus

Possible features:

- Unlimited records
- Advanced intelligence
- Family accounts
- Secure document vault
- Receipt scanning
- AI assistant
- Advanced reports
- Warranty tracking

Marketplace revenue

Commission from service providers.

Business partnerships

Potential partnerships with:

- Insurance companies
- Auto service companies

- Property services
- Utility providers
- Repair companies
- Cleaning companies

Importantly, sponsored recommendations should be clearly labelled and should not manipulate alerts.

32. Key Differentiator

LifeDesk should **not position itself as:**

“An app for reminders.”

Instead:

LifeDesk is a personal life-maintenance system.

The distinction is important.

A reminder says:

“Your insurance expires.”

LifeDesk says:

“Your insurance expires in 12 days. Here's what you need to prepare, and here's what you can do next.”

That's the product.

33. Competitive Positioning

LifeDesk sits at the intersection of:

Calendar + Reminder + Household Manager + Document Tracker + Maintenance Log + Bill Tracker + Service Directory

But its unique layer is:

Predictive Life Management

Most tools record what happened.

LifeDesk helps users prepare for **what's coming next**.

34. Success Metrics

Activation

Percentage of new users who add at least **3 life responsibilities**.

Engagement

Weekly active users.

Retention

30-day and 90-day retention.

Core value metric

Problems prevented.

For example:

- Renewals completed before expiry
- Maintenance completed before overdue
- Bills paid before due date
- Documents renewed before expiry

Business metrics

- Free → paid conversion
- Subscription revenue
- Marketplace transactions

- Service-provider commissions
 - Customer acquisition cost
 - Lifetime value
-

35. North Star Metric

I would use:

Prevented Life Problems

The number of important responsibilities LifeDesk helps users handle **before they become overdue, expired, or urgent**.

This is much more meaningful than simply counting app opens.

36. Example User Scenario

Imagine a Nigerian user named **Tunde**.

He adds:

Home

- Rent: ₦1.2m, due December 1
- Electricity
- Generator maintenance

Vehicle

- Insurance
- Driver's licence
- Oil change

Bills

- Internet
- Cable

- Phone

Documents

- Passport
- Professional certificate

LifeDesk sees:

 **5 things need attention in the next 30 days.**

It identifies:

- Internet renewal — 2 days
- Oil change — overdue
- Generator service — due in 9 days
- Insurance — 18 days
- Rent preparation — 30 days

Tunde doesn't have to remember everything.

LifeDesk remembers for him.

37. The Long-Term Vision

Eventually, LifeDesk could evolve from:

Reminder app

→ **Life-management platform**

→ **Household operating system**

→ **Everyday services ecosystem**

The long-term experience becomes:

“Tell LifeDesk what matters to you once. LifeDesk helps you stay ahead of it.”

The strongest part of this concept

I would **keep the product focused on one fundamental promise:**

LifeDesk helps you prevent everyday problems before they happen.

That gives us a very clear product story.

And I would **not overload the first version with banking, healthcare, full budgeting, social networking, or dozens of AI features.** Those can dilute what makes the concept special.

The MVP should prove one thing:

Can LifeDesk genuinely help a Nigerian household stay ahead of the responsibilities that keep life running?

If the answer is yes, the later **family, AI, document, maintenance and service marketplace layers** become natural extensions rather than random features.
